Manvi Panjwani

San Francisco, CA | 331-203-2895 | manvi.panjwani@gmail.com | linkedin/manvi-panjwani | portfolio

EDUCATION

Master of Science in Computer Science (STEM) December 2025
Clark University; Worcester, MA.

Bachelor of Technology in Computer Science May 2022
Amity University; Noida, India.

RELEVANT SKILLS

AI / LLM: RAG Systems, Agentic AI Workflows, OpenAI, Claude, Gemini, Prompt Engineering, Function Calling, Structured Outputs, LangChain, LangGraph, Multi-Agent Systems, Evaluation Pipelines, Retrieval Evaluation, Multi-Model Orchestration
Languages: Python, Java, C/C++, SQL, Go, R, TypeScript, JavaScript, React, Next.js, Angular, React Native, HTML/CSS, Swift
Cloud & DevOps: AWS, GCP, Docker, Kubernetes, Linux, Git, Terraform, CI/CD
Data & ML: Pandas, NumPy, scikit-learn, Spark, Snowflake, RL, LangChain, FastAPI
Tools: PostgreSQL, MySQL, Redis, Firebase, Jira, Postman, REST APIs, Cisco Packer Tracer, Salesforce, NoSQL

Certifications: Google Cloud Professional Machine Learning Engineer (November 2025), AWS Certified Developer - Associate (May,2025), AWS Certified AI Practitioner (May,2025), Python for Data Science and Machine Learning - IBM Certified Developer (2021), Cisco Certified Network Associate (CCNA) (2020).

EXPERIENCE

Softmax; San Francisco, CA; USA **J**anuary 2026 – March 2026
Visiting Researcher

- Built and used reinforcement learning on multi-agent AI systems in virtual environments to study coordination, decision-making, and alignment between agents and humans.
- Developed evaluation and observability pipelines to benchmark agent performance across large-scale experiments, enabling systematic comparison of reasoning quality and alignment outcomes.
- Developed evaluation pipelines using CoGames (Alignment League benchmark) to measure agent performance, enabling scalable comparison across scenarios.
- Analyzed agent behaviors and interaction patterns to identify performance gaps and improve robustness and alignment outcomes.

GlaxoSmithKline; Cambridge, MA; USA May 2025-August 2025
Governance Engineer Intern

- Developed documentation and onboarding workflows, reducing ramp-up time for new engineers and began implementing policy-as-code scripts using Open Policy Agent (open Source) within the Onyx framework ahead of schedule, enhancing compliance automation and reducing manual policy enforcement through consistent, scalable solutions.
- Designed and implemented Rego policies for real-time governance use cases while collaborating on GitHub repositories, CI/CD pipelines, and low-code Terraform deployment strategies to streamline integration and onboarding.

Nokia; Bengaluru; India July 2022-January 2024
Associate Software Engineer

- Worked on large-scale distributed network management systems (NSP) in production environments, focusing on reliability, scalability, and operational efficiency across diverse network infrastructures.
- Investigated and resolved complex system and network issues involving TCP/IP, routing domains, node management, and Linux-based service workflows, improving stability and reducing downtime.
- Developed automation and testing workflows for configuration management, monitoring, and validation, helping improve deployment reliability and overall system performance.

Graduate Engineer Trainee Intern March 2022-June 2022

- Conducted technical research on NSP architecture, improving system understanding and onboarding speed.
- Documented system workflows and requirements, improving cross-functional communication.

RELATED PROJECTS

- **PocketPilot –** Built an AI-powered system that interprets natural language inputs and generates structured outputs using LLM-style workflows. Designed backend APIs enabling real-time interaction between AI logic and user interface.
- **AI/ML-Based Ingredient Classification for Health Impact-** Developed a barcode-scanning full stack web/mobile design app to instantly assess food and personal care product health impacts.
